

Customer-Facing Compliance Report

Framework: APRA CPS 234 - Information Security

Primary audience: Australian banks, insurers, superannuation trustees, and other APRA-regulated entities.

CSW positioning: Critical information asset visibility, control testing, service-provider dependency review, and incident scoping.

Executive Summary

Cisco Secure Workload (CSW) can support this framework by producing workload-level evidence for inventory, application dependency mapping, segmentation design, policy simulation, vulnerability context, and incident investigation. The strongest customer story is not that CSW "certifies" compliance; it is that CSW turns workload communication into evidence that control owners, assessors, and technical teams can review.

Suggested CSW Scope Pattern

APRA-CPS234 > Critical-Information-Assets, Material-Operations, Service-Providers, Incident-Evidence

This scope pattern should be validated with the customer's architecture, application owners, compliance team, and assessor before it is used for formal evidence.

Outcomes CSW Can Support

- ? Map workloads to critical information assets and material operations.
- ? Use policy simulation and flow review as technical control-testing evidence.
- ? Identify third-party service-provider communication paths.
- ? Support incident scoping with flow and process telemetry.

Evidence Package

- ? Critical information asset workload inventory
- ? Control-testing export
- ? Service-provider egress map
- ? Policy candidate and exception register
- ? Incident scoping example

POV / Workshop Approach

1. Select one business service, regulated boundary, or critical workload group.
2. Validate workload coverage and install sensors or configure supported connectors.
3. Apply labels for application, environment, owner, data class, criticality, compliance

scope, and lifecycle.

4. Observe flows over a representative business window.

5. Use ADM to generate a candidate policy and review it with the application owner.

6. Package inventory, scope, flows, policy, exceptions, and known gaps as the evidence output.

Boundaries and Complementary Controls

CSW does not replace APRA notification decisions, formal control ownership, supplier assurance, IAM, EDR, or GRC workflows.

Disclaimer

This report is for informational and planning purposes. It is not legal, regulatory, audit, or certification advice. Validate all mappings against the current official framework text, the customer's environment, and qualified compliance, legal, and audit professionals.
