

Customer-Facing Compliance Report

Framework: BSI C5 - Cloud Computing Compliance Criteria Catalogue

Primary audience: Cloud service providers, SaaS operators, and cloud customers using BSI C5 as a cloud assurance baseline.

CSW positioning: Cloud workload segmentation, tenant/shared-service boundaries, vulnerability handling, monitoring, and incident evidence.

Executive Summary

Cisco Secure Workload (CSW) can support this framework by producing workload-level evidence for inventory, application dependency mapping, segmentation design, policy simulation, vulnerability context, and incident investigation. The strongest customer story is not that CSW "certifies" compliance; it is that CSW turns workload communication into evidence that control owners, assessors, and technical teams can review.

Suggested CSW Scope Pattern

BSI-C5 > Cloud-Service-Scope, Production-Service, Tenant-Shared-Services, Customer-Data-Stores, Supplier-Egress

This scope pattern should be validated with the customer's architecture, application owners, compliance team, and assessor before it is used for formal evidence.

Outcomes CSW Can Support

- ? Map cloud service workloads and shared services.
- ? Document tenant, customer-data, and supplier communication boundaries.
- ? Use workload telemetry for communication security evidence.
- ? Package vulnerability and incident evidence for cloud assurance.

Evidence Package

- ? Cloud workload inventory
- ? Scope tree and cloud tag mapping
- ? Tenant/shared-service flow summary
- ? Supplier egress summary
- ? Policy candidate and incident evidence sample

POV / Workshop Approach

1. Select one business service, regulated boundary, or critical workload group.
2. Validate workload coverage and install sensors or configure supported connectors.
3. Apply labels for application, environment, owner, data class, criticality, compliance

scope, and lifecycle.

4. Observe flows over a representative business window.

5. Use ADM to generate a candidate policy and review it with the application owner.

6. Package inventory, scope, flows, policy, exceptions, and known gaps as the evidence output.

Boundaries and Complementary Controls

CSW does not replace BSI C5 attestation, CSP controls, IAM/KMS, backup/DR, portability, or shared-responsibility decisions.
