

Cisco Secure Workload - TISAX Compliance Report

Customer-Facing Compliance Report

Framework: TISAX / VDA ISA

Primary audience: Automotive OEMs, suppliers, engineering partners, and providers preparing for TISAX assessment.

CSW positioning: Prototype protection, engineering-system segmentation, customer-confidential workload boundaries, and supplier/customer egress evidence.

Executive Summary

Cisco Secure Workload (CSW) can support this framework by producing workload-level evidence for inventory, application dependency mapping, segmentation design, policy simulation, vulnerability context, and incident investigation. The strongest customer story is not that CSW "certifies" compliance; it is that CSW turns workload communication into evidence that control owners, assessors, and technical teams can review.

Suggested CSW Scope Pattern

TISAX > Prototype-Protection, Engineering-Systems, Customer-Confidential, Supplier-Customer-Egress

This scope pattern should be validated with the customer's architecture, application owners, compliance team, and assessor before it is used for formal evidence.

Outcomes CSW Can Support

- ? Map prototype, engineering, and customer-confidential workloads.
- ? Document supplier and customer communication paths.
- ? Identify excessive lateral access or unexpected egress.
- ? Support VDA ISA assessment evidence with workload telemetry.

Evidence Package

- ? TISAX scope workload inventory
- ? Supplier/customer egress summary
- ? Flow and process telemetry summary
- ? Vulnerability exposure report
- ? Policy candidate and exception register

POV / Workshop Approach

1. Select one business service, regulated boundary, or critical workload group.
2. Validate workload coverage and install sensors or configure supported connectors.
3. Apply labels for application, environment, owner, data class, criticality, compliance

scope, and lifecycle.

4. Observe flows over a representative business window.

5. Use ADM to generate a candidate policy and review it with the application owner.

6. Package inventory, scope, flows, policy, exceptions, and known gaps as the evidence output.

Boundaries and Complementary Controls

CSW does not replace physical prototype controls, DLP, IAM, supplier contracts, or TISAX assessor judgment.

Disclaimer

This report is for informational and planning purposes. It is not legal, regulatory, audit, or certification advice. Validate all mappings against the current official framework text, the customer's environment, and qualified compliance, legal, and audit professionals.
