

Customer-Facing Compliance Report

Framework: Cloud Security Alliance Cloud Controls Matrix v4

Primary audience: Cloud security, SaaS, IaaS/PaaS, and STAR certification preparation teams.

CSW positioning: Cloud workload segmentation, IVS-09 network security, DSP data isolation, TVM reachability, and STAR evidence support.

Executive Summary

Cisco Secure Workload (CSW) can support this framework by producing workload-level evidence for inventory, application dependency mapping, segmentation design, policy simulation, vulnerability context, and incident investigation. The strongest customer story is not that CSW "certifies" compliance; it is that CSW turns workload communication into evidence that control owners, assessors, and technical teams can review.

Suggested CSW Scope Pattern

CSA-CCM > Cloud-Workloads, Tenant-Boundaries, Data-Protection, Network-Security, Threat-Vulnerability-Management

This scope pattern should be validated with the customer's architecture, application owners, compliance team, and assessor before it is used for formal evidence.

Outcomes CSW Can Support

- ? Map cloud workloads to tenant and data-boundary labels.
- ? Support infrastructure and virtualization security evidence.
- ? Identify reachability of vulnerable cloud workloads.
- ? Package segmentation and monitoring artifacts for STAR discussions.

Evidence Package

- ? Cloud workload inventory
- ? Tenant and data-boundary flow summary
- ? IVS / DSP / TVM evidence package
- ? Vulnerability reachability summary
- ? Policy candidate and exception register

POV / Workshop Approach

1. Select one business service, regulated boundary, or critical workload group.
2. Validate workload coverage and install sensors or configure supported connectors.
3. Apply labels for application, environment, owner, data class, criticality, compliance scope, and lifecycle.

4. Observe flows over a representative business window.
5. Use ADM to generate a candidate policy and review it with the application owner.
6. Package inventory, scope, flows, policy, exceptions, and known gaps as the evidence output.

Boundaries and Complementary Controls

CSW does not replace CSP native controls, IAM, KMS, logging retention, cloud posture management, STAR attestation, or shared-responsibility decisions.
