

Customer-Facing Compliance Report

Framework: NIST SP 800-171 Rev. 3

Primary audience: Defense industrial base, CUI enclave owners, CMMC preparation teams, and security architects.

CSW positioning: CUI enclave isolation, 03.01 and 03.13 flow enforcement, Rev. 3 family alignment, and CMMC Level 2 underpinning evidence.

Executive Summary

Cisco Secure Workload (CSW) can support this framework by producing workload-level evidence for inventory, application dependency mapping, segmentation design, policy simulation, vulnerability context, and incident investigation. The strongest customer story is not that CSW "certifies" compliance; it is that CSW turns workload communication into evidence that control owners, assessors, and technical teams can review.

Suggested CSW Scope Pattern

NIST-800-171 > CUI-Enclave, CUI-Applications, Boundary-Services, Admin-Paths, External-Connections

This scope pattern should be validated with the customer's architecture, application owners, compliance team, and assessor before it is used for formal evidence.

Outcomes CSW Can Support

- ? Identify CUI-related workloads and enclave boundaries.
- ? Support access control and system communication protection evidence.
- ? Document allowed and observed workload communication paths.
- ? Package evidence that can inform CMMC Level 2 preparation.

Evidence Package

- ? CUI workload inventory
- ? Enclave flow and boundary map
- ? Policy candidate and exception register
- ? External connection summary
- ? Vulnerability and monitoring evidence

POV / Workshop Approach

1. Select one business service, regulated boundary, or critical workload group.
2. Validate workload coverage and install sensors or configure supported connectors.
3. Apply labels for application, environment, owner, data class, criticality, compliance

scope, and lifecycle.

4. Observe flows over a representative business window.

5. Use ADM to generate a candidate policy and review it with the application owner.

6. Package inventory, scope, flows, policy, exceptions, and known gaps as the evidence output.

Boundaries and Complementary Controls

CSW does not replace CUI marking, contracts, SSP/POA&M ownership, identity governance, encryption, media protection, or CMMC assessment decisions.
